About the course Excel skills for busines intermediate

Course Presenter : Career4freshers

Excel skills for busines intermediate, in this course offered by Macquarie University on Coursera, builds on foundational Excel knowledge to teach more advanced features for business applications. In this course, you will learn how to create complex formulas, use advanced functions like VLOOKUP, INDEX, MATCH, and IF statements, and utilize conditional formatting to highlight data trends. You'll also explore the use of pivot tables to summarize large datasets, along with techniques for data validation and creating dynamic charts. Additionally, the course introduces techniques for automating repetitive tasks using Excelâ€™s powerful features, making your workflow more efficient. Whether you're analyzing data, preparing reports, or working with business models, this course will enhance your Excel proficiency and provide you with the tools to manipulate and present data effectively in the business world. By the end, you'll be well-equipped to tackle intermediate Excel tasks with confidence. Career4freshers
