About the course Technical analysis

Course Presenter : TruePrep

Technical analysis, In this course we will learn about Technical Analysis course, designed to help traders and investors understand how to analyze financial markets using price charts, patterns, and indicators. You will explore the basics of chart types, candlestick patterns, and how to identify trends using support and resistance levels. The course also covers moving averages, momentum indicators like RSI and MACD, and chart formations such as triangles, head and shoulders, and double tops and bottoms. In addition, you will study volume analysis, reversal and continuation signals, and the role of different timeframes in decision-making. Practical lessons will show you how to combine indicators, manage risks, and avoid common mistakes. Whether you trade stocks, forex, or cryptocurrencies, this course will give you the tools to interpret market behavior, recognize opportunities, and develop strategies with greater confidence and accuracy.
