About the course Making waste water treatment plant model

Course Presenter : howtofunda

Making waste water treatment plant model, in this course introduces students to the process of cleaning and reusing wastewater through an interactive, hands-on project. In this course, learners design a miniature treatment plant using materials such as plastic bottles, pipes, sand, gravel, charcoal, cotton, and filters to simulate the different stages of purification. The model demonstrates how wastewater passes through primary treatment (removing large particles), secondary treatment (biological processes that break down organic matter), and tertiary treatment (filtration and disinfection for safe reuse). Students also learn the importance of wastewater management in conserving clean water, reducing pollution, and protecting ecosystems. The course connects theory with real-world applications by showing how modern treatment plants supply safe water for households, agriculture, and industry. By building this model, learners gain problem-solving, critical thinking, and environmental awareness skills. This project is ideal for science fairs, classroom demonstrations, and awareness programs, making it both educational and impactful for sustainable living. howtofunda

Science Category's Courses

Course Lesson(13)

Lesson 1 : **Eco Friendly DIY Project Waste Water Treatment Filter Working Model HowToFunda**

Lesson 2 :
waste water treatment plant working model DIY inspire award social Science Project howtofunda

Lesson 3 :
waste water treatment plant working model inspire science project DIY bestoutofwaste sewage

Lesson 4 :
wastewater treatment or purification working model for science project exhibition DIY pandit

Lesson 5 :
integrated waste management plastic recycling working model for science project diy howtofunda

Lesson 6 :
drip irrigation working model science fair project 3d DIY howtofunda innovative inspire award

Lesson 7 :
rain water harvesting working model 3d diy at home innovative and creative design howtofunda

Lesson 8 :
drip irrigation working model 3d science project DIY using paper cup and cardboard howtofunda

Lesson 9 : **Dam working model 3d inspire award howtofunda innovative project science project**

Lesson 10 :
water pollution working model making using cardboard and waste materials diy best out of waste

Lesson 11 :
hydroponic farming working model for science exhibition inspire award science project howtofunda

Lesson 12 :
distillation of water working model science project for exhibition chemistry diy howtofunda

Lesson 13 : **bio gas plant working model making science project howtofunda source of energy**
