About the course Perceptual Constancy in Developmental

Perceptual Constancy course, in this course we will learn about the Perceptual Constancy phenomenon, which refers to our ability to perceive objects as stable and unchanged despite variations in their sensory input. Exploring theories and research findings from psychology, neuroscience, and cognitive science, students will delve into the mechanisms underlying perceptual constancy, including size, shape, color, and brightness constancies. Through interactive discussions and practical demonstrations, participants will gain insights into how the brain processes sensory information to maintain stable perceptions of the external world, even in the face of changing environmental conditions. Additionally, we will examine the role of perceptual constancy in various domains such as visual perception, object recognition, and virtual reality technologies.
