Mindluster Platform

About the course Annotations in Java

Java annotations are metadata (data about data) for our program source code. They provide additional information about the program to the compiler but are not part of the program itself. These annotations do not affect the execution of the compiled program. Let's take an example of @Override annotation.

Programming Category's Courses

Course Lesson(3)

Lesson 1 : **15 8 Annotation in Java part 1 | Basics**

Lesson 2 : **15 9 Annotation in Java part 2 | Creating Custom Annotation**

Lesson 3 : **15 10 Annotation in Java part 3 | Using Custom Annotation**
