About the course Nucleotide Biosynthetic Pathways

Nucleotide Biosynthetic course, in this course we will delve into the intricate mechanisms underlying Nucleotide Biosynthesis, exploring enzyme kinetics, regulation, and metabolic pathways. Understanding these processes is essential for comprehending cellular metabolism, drug development targeting these pathways, and addressing genetic disorders associated with aberrant Nucleotide Biosynthesis.

Medical Category's Courses

Course Lesson(3)

Lesson 1 : **Pyrimidine Synthesis and Salvage Pathway**

Lesson 2 : **Purine Synthesis and Salvage Pathway**

Lesson 3 : **Purine and Pyrimidine Catabolism Pathway Nucleotide Breakdown Biochemistry Lesson**

Related courses
