About the course Bitemporal Hemianopia Diagnosis

Bitemporal Hemianopia course, in this course we will learn about bitemporal hemianopia, a visual field defect characterized by the loss of peripheral vision in both temporal fields. We'll explore its causes, which often involve lesions affecting the optic chiasm, such as pituitary adenomas or traumatic brain injury. Through case studies and diagnostic approaches, we'll delve into the clinical presentation, neuroimaging findings, and management strategies for patients with bitemporal hemianopia, including medical and surgical interventions, rehabilitation techniques, and visual aids to improve quality of life and functional independence.

Medical Category's Courses

Course Lesson(3)
