About the course Monoclonal Antibodies in Infectious Diseases

Monoclonal Antibodies course, in this course we will explore the world of monoclonal antibodies, focusing on their production, mechanisms of action, and therapeutic applications. Delving into their engineering, therapeutic uses in cancer, immunotherapy, autoimmune diseases, and infectious diseases, we'll discuss their role in precision medicine and future advancements. Understanding monoclonal antibodies is essential for healthcare professionals and researchers aiming to harness their potential in treating various medical conditions.

Medical Category's Courses

Course Lesson(6)

Lesson 1 : **How does sitagliptin work DPP 4 inhibitors and GLP 1 mimetics**

Lesson 2 : **How do GnRH analogues work Zoladex Prostap and other GnRH analogues**

Lesson 3 : **How Does Furosemide Work Understanding Loop Diuretics**

Lesson 4 : **How do monoclonal antibodies work Rituximab infliximab adalimumab and others**

Lesson 5 : **How do ACE inhibitors work**

Lesson 6 : **How do Thiazide Diuretics Work Understanding Bendroflumethiazide and Indapamide**
