About the course Acute Ischemic Stroke Symptoms and Treatment

Acute Ischemic Stroke Symptoms course, in this course we will thoroughly explore the signs and symptoms indicative of acute ischemic stroke, a medical emergency caused by a blockage in a blood vessel supplying oxygen to the brain. Participants will learn to recognize classic symptoms such as sudden onset of weakness or numbness in the face, arm, or leg, difficulty speaking or understanding speech, vision disturbances, severe headache, and dizziness. Through case studies and interactive discussions, learners will develop proficiency in identifying acute ischemic stroke symptoms promptly, facilitating timely intervention and potentially improving patient outcomes.
