About the course Vertigo Causes and Treatments

Vertigo Causes course, in this course we will explore the various factors and conditions that can lead to vertigo. Participants will examine the pathophysiology of vertigo, including inner ear disorders, vestibular migraines, Meniere's disease, and benign paroxysmal positional vertigo (BPPV). Through case studies and discussions, learners will gain insights into the assessment, diagnosis, and management of vertigo, aiming to improve patient care and outcomes in clinical practice.

Medical Category's Courses

Course Lesson(9)

Lesson 1 : **Physiology of Touch Receptors and Pathways Animation**

Lesson 2 : **Physiology of Pain Animation**

Lesson 3 : **Gate Control Theory of Pain Animation**

Lesson 4 : **Taste Anatomy and Physiology Animation**

Lesson 5 : **Olfactory System Anatomy and Physiology Pathways Animation**

Lesson 6 : **Mechanism of Hearing Animation**

Lesson 7 : **The Vestibular System Animation**

Lesson 8 : **Vertigo Causes Pathophysiology and Treatments Animation**

Lesson 9 : **Vision Anatomy and Physiology Animation**
