Mindluster Platform

About the course Docker Crash

With the docker ps results, we can see that when an application within a Docker container exits, that container is also stopped. This means that, by default, if an application that is running within a container crashes, the container stops and that container will remain stopped until someone or something restarts it.

Programming Category's Courses

Course Lesson(19)

Lesson 1 : **Docker Introduction 01**

Lesson 2 : **Docker Internals 02**

Lesson 3 : **Docker Installation and setup 03**

Lesson 4 : **Docker Terminology 04**

Lesson 5 : **Docker Playing with Dokcer Containers 05**

Lesson 6 : **docker file to docker containers 06**

Lesson 7 : **Dcoker Commands 07**

Lesson 8 : **Docker Volume mapping and Port Mapping 08**

Lesson 9 : **Docker Networking 09**

Lesson 10 : **Understanding Docker File 10**

Lesson 11 : **Docker Node JS Running App using Docker 11**

Lesson 12 : **Riunning Node App using Dockerfile 10**

Lesson 13 : **Application Setup using Docker 11**

Lesson 14 : **Understanding Kitematic Tool 12**

Lesson 15 : **Understanding docker compose 13**

Lesson 16 : **Running Docker compose Demo 14**

Lesson 17 : **More On Docker Next Step 15**

Lesson 18 : **docker compose examples 16**

Lesson 19 : **Managing Docker containers using Portainer**
