About the course Antiarrhythmic Drug Therapy

Antiarrhythmic Drug course, in this course we will delve into the classification, mechanisms of action, pharmacokinetics, and clinical use of antiarrhythmic medications. Participants will explore the diverse classes of antiarrhythmics, including sodium channel blockers, beta-blockers, potassium channel blockers, and calcium channel blockers. Through comprehensive study, attendees will gain insights into the indications, contraindications, and potential adverse effects of antiarrhythmic drugs, empowering them to make informed decisions in arrhythmia management.

Medical Category's Courses

Course Lesson(20)

Lesson 1 : **Antibiotics**

Lesson 2 : **Antivirals HIV Hepatitis Influenza Herpes Treatment**

Lesson 3 : **Antifungals**

Lesson 4 : **Antimycobacterials Anti TB Drugs**

Lesson 5 : **Pharmacokinetics Drug Absorption**

Lesson 6 : **Pharmacokinetics Drug Metabolism**

Lesson 7 : **Pharmacokinetics Drug Excretion**

Lesson 8 : **Pharmacokinetics Drug Clearance**

Lesson 9 : **Pharmacodynamics**

Lesson 10 : **Autonomic Pharmacology Cholinergic Agonists**

Lesson 11 : **Autonomic Pharmacology Muscarinic Antagonists**

Lesson 12 : **Autonomic Pharmacology Adrenergic Agonists**

Lesson 13 : **Autonomic Pharmacology Adrenergic Antagonists**

Lesson 14 : **Antihypertensive Drugs**

Lesson 15 : **Antianginal Drugs**

Lesson 16 : **Antiarrhythmic Drugs**

Lesson 17 : **Diuretics**

Lesson 18 : **Antiplatelet Anticoagulant Thrombolytic Agents**

Lesson 19 : **Anxiolytic Hypnotic Drugs**

Lesson 20 : **Parkinson s Disease Drugs**
