About the course Blood Sugar Testing Methods

Blood Sugar Testing course, in this course participants will explore various methods and techniques for blood sugar testing. Covering principles of glucose monitoring, interpretation of results, and the significance of testing in diabetes management, learners will gain practical skills in using different testing devices. Emphasis will be placed on continuous glucose monitoring (CGM), point-of-care testing, and understanding the importance of regular monitoring in maintaining glycemic control. Through interactive sessions and case studies, participants will enhance their proficiency in blood sugar testing and its clinical applications.

Medical Category's Courses

Course Lesson(9)

Lesson 1 : **Cranial Nerves Exam Clinical Skills**

Lesson 2 : **Upper Limb Neuro Exam**

Lesson 3 : **Lower Limb Neuro Exam**

Lesson 4 : **Gait Examination**

Lesson 5 : **Cerebral Palsy Physical Exam**

Lesson 6 : **Peripheral IV Insertion Nursing**

Lesson 7 : **Ultrasound Guided Peripheral IV Insertion**

Lesson 8 : **Cardiac Auscultation Eko DUO**

Lesson 9 : **Testing Blood Sugar Glucose Levels Using a Glucometer CareSens**
