About the course Menstrual Cycle Disorders and Hormones

Menstrual Cycle Disorders course, in this course we will explore the various disruptions and abnormalities that can affect the menstrual cycle. From irregular periods and heavy bleeding to absence of menstruation (amenorrhea) and painful periods (dysmenorrhea), we'll delve into the causes, symptoms, and management strategies for common menstrual cycle disorders. Additionally, we'll discuss underlying hormonal imbalances, reproductive health implications, and the impact of these disorders on overall well-being. Understanding these conditions is essential for healthcare professionals to provide accurate diagnosis and tailored treatment plans for individuals experiencing menstrual cycle disorders.
