Mindluster Platform

About the course Distributed Computing with Python

Now it turns out that Python specifically has issues with performance when it comes to distributed systems because of its Global Interpreter Lock (GIL). This is basically the soft underbelly of Python that only allows for a single thread to be controlled by the interpreter at a time .

Programming Category's Courses

Course Lesson(7)

Lesson 1 :
Concurrent and Distributed Computing with Python The Course Overview | packtpub com

Lesson 2 : **Concurrent and Distributed Computing with Python Creating Threads | packtpub com**

Lesson 3 :
Concurrent and Distributed Computing with Python Creating and Managing Processes | packtpub com

Lesson 4 :
Concurrent and Distributed Computing with Python Diving Asynchronous Program | packtpub com

Lesson 5 : **Concurrent and Distributed Computing with Python Celery Concepts | packtpub com**

Lesson 6 :
Concurrent and Distributed Computing with Python Pyro as an Alternative to Celery | packtpub com

Lesson 7 :
Concurrent and Distributed Computing with Python AWS SQS and Distributed Tasks | packtpub com
