About the course Data Types in Python for Beginners

Data Types in Python course, in this course we will learn about the Data Types in Python, covering fundamental concepts such as integers, floats, strings, lists, tuples, dictionaries, and sets. Participants will explore how to declare and manipulate different data types, understand their properties, and perform operations specific to each type. Through practical examples and exercises, learners will gain a solid understanding of Python's versatile data types and how to effectively utilize them in programming tasks. This foundational knowledge will lay the groundwork for mastering Python programming and data manipulation.

Computer Science Category's Courses

Course Lesson(10)

Lesson 1 : **Installing Jupyter Notebooks Anaconda Python for Beginners**

Lesson 2 : **Variables in Python Python for Beginners**

Lesson 3 : **Data Types in Python Python for Beginners**

Lesson 4 : **Comparison Logical and Membership Operators in Python Python for Beginners**

Lesson 5 : **If Else Statements in Python Python for Beginners**

Lesson 6 : **For Loops in Python Python for Beginners**

Lesson 7 : **While Loops in Python Python for Beginners**

Lesson 8 : **Functions in Python Python for Beginners**

Lesson 9 : **Converting Data Types in Python Python for Beginners**

Lesson 10 : **Building a BMI Calculator with Python Python Projects for Beginners**
