About the course Backend web development for beginners

Backend web development course, in this course we will learn about the essential concepts and technologies involved in backend web development. Participants will delve into server-side programming languages like Python, Node.js, or Java, along with frameworks such as Express.js, Flask, or Spring Boot. Through hands-on projects and exercises, learners will explore topics such as database management, API development, authentication, and server deployment. By the end of the course, students will have a solid foundation in backend development, equipping them with the skills needed to create dynamic and scalable web applications.
