Mindluster Platform

About the course Mapping and Geospatial Data Analysis

Geospatial analytics is used to add timing and location to traditional types of data and to build data visualizations. These visualizations can include maps, graphs, statistics and cartograms that show historical changes and current shifts. This additional context allows for a more complete picture of events.

Programming Category's Courses

Course Lesson(3)

Lesson 1 : **An Interactive Tool for Using Landsat 8 Data in MATLAB**

Lesson 2 : **MATLAB for Analyzing and Visualizing Geospatial Data**

Lesson 3 : **Developing Quantitative Skills Using Geoscience Data with MATLAB**
