About the course Podiatric Anatomy and Physiology

Podiatric Anatomy course, in this course participants will delve into a comprehensive study of the anatomy of the foot and ankle, focusing on structures unique to podiatry. Through detailed exploration of bones, muscles, ligaments, nerves, and vasculature, students will gain a thorough understanding of foot biomechanics and pathology. This knowledge forms the foundation for diagnosing and treating various podiatric conditions, enabling practitioners to provide effective care for patients' foot and ankle health.
