About the course Powershell tools and scripting for beginners

Powershell tools and scripting course, in this course delve into the fundamentals and advanced aspects of utilizing Powershell for system administration, automation, and scripting on Windows environments. Participants explore a plethora of tools and techniques, including Powershell ISE, Powershell Core, Visual Studio Code, and Powershell Modules. Through hands-on exercises and practical examples, learners gain proficiency in creating efficient scripts for tasks ranging from system management to data analysis. The curriculum covers topics such as script syntax, variables, loops, conditional statements, functions, error handling, and interacting with external systems and services. By the end of the course, students emerge with a comprehensive understanding of Powershell's capabilities and how to leverage them effectively in real-world scenarios.
