About the course Data observability technologies

Data observability course, in this course we will delve into the realm of Data Observability, exploring its pivotal role in ensuring data quality and reliability across various systems and processes. We'll start by defining Data Observability, understanding its significance, and examining the key principles behind it. Through a series of modules, we will learn practical techniques for monitoring data performance, maintaining data quality, and analyzing data in real-time to gain valuable insights. Additionally, we will explore the importance of data visualization in enhancing observability and discuss best practices for implementing and optimizing Data Observability strategies. By the end of the course, you'll be equipped with the knowledge and tools needed to effectively monitor and manage data, ensuring its accuracy, integrity, and usability in diverse organizational contexts.

Computer Science Category's Courses

Course Lesson(13)

Lesson 1 : **Data Fabric Explained**

Lesson 2 : **What is Data Mining**

Lesson 3 : **What is Data Observability**

Lesson 4 : **What is Synthetic Data No It s Not Fake Data**

Lesson 5 : **What is Time Series Analysis**

Lesson 6 : **What is Data Lineage**

Lesson 7 : **Overfitting Underfitting and Bad Data Are Ruining Your Predictive Models**

Lesson 8 : **Generative AI A Conversation with Malcolm Gladwell DarÃo Gil**

Lesson 9 : **What Makes Large Language Models Expensive**

Lesson 10 : **Ten Everyday Machine Learning Use Cases**

Lesson 11 : **Large Language Models How Large is Large Enough**

Lesson 12 : **Fight Insider Threats with AI infused SIEM**

Lesson 13 : **What is a Data Contract**
