Mindluster Platform

About the course Google Cloud platform security essentials

Google Cloud platform security course, in this course participants will delve into the intricacies of securing applications and data on the Google Cloud platform. Covering a comprehensive range of topics, this course equips learners with essential knowledge and practical skills to ensure robust security measures are in place across various cloud services and infrastructure. From identity and access management to encryption and compliance, students will explore best practices and industry standards for safeguarding sensitive information. Through hands-on exercises and real-world case studies, participants will gain insights into threat detection, incident response, and mitigation strategies tailored specifically for the Google Cloud environment. By the end of the course, attendees will emerge with a deep understanding of Google Cloud platform security principles, enabling them to implement effective security solutions and protect assets against evolving cyber threats.

Computer Science Category's Courses

Course Lesson(4)

Lesson 1 : **What is Google Cloud Platform Gloogle Cloud Platform Tutorial Part 1 Intellipaat**

Lesson 2 :
Cloud Architect Create Virtual Machine Google Cloud Platform Tutorial Part 2 Intellipaat

Lesson 3 :
Introduction to Client Libraries GCP CLI Tutorial Google Cloud Platform Part 3 Intellipaat

Lesson 4 : **What is VPC Cloud Architecture Exam Guide Google Cloud Platform Part 4 Intellipaat**
