About the course Data normalization information systems

Data normalization information systems course, in this course students delve into the principles and practices of organizing data efficiently within information systems. The curriculum covers various techniques such as normalization forms, database design strategies, denormalization concepts, data preprocessing methods, and ETL processes. Through comprehensive study and hands-on exercises, participants understand how to ensure data consistency, reduce redundancy, and optimize database performance. This course equips learners with essential skills to effectively manage data in information systems, enhancing their ability to design, implement, and maintain robust databases tailored to organizational needs.

Computer Science Category's Courses

Course Lesson(3)

Lesson 1 :
First Normal Form 1nf Data Normalization Information Systems and Controls ISC CPA Exam

Lesson 2 :
Second Normal Form 2NF Data Normalization Information Systems and Controls ISC CPA Exam

Lesson 3 : **3NF Third Normal Form Information Systems and Controls ISC CPA Exam**
