About the course SQL string functions for beginners

SQL string functions course, in this course we explore the powerful capabilities of string functions in SQL for manipulating and processing text data within databases. Through comprehensive tutorials and practical examples, participants will learn about a variety of string functions available in SQL, such as SUBSTRING, UPPER, LOWER, CONCAT, and more. We'll cover how to extract substrings, change case, concatenate strings, search for specific patterns, and perform various other text-related operations. Whether you're a beginner or an experienced SQL user, this course equips you with the knowledge and skills needed to effectively utilize string functions to enhance data analysis and manipulation tasks. Join us as we delve into the world of SQL string functions and unlock their potential for transforming and optimizing text data within databases. Let's embark on a journey to master SQL string functions together.

Computer Science Category's Courses

Course Lesson(5)

Lesson 1 : **Learn SQL String Functions Concatenation and Substrings**

Lesson 2 : **Learn SQL String Functions Replace Repeat and Cases**

Lesson 3 : **Introducing SQL Joins Inner and Outer SQL for Beginners**

Lesson 4 : **Learn SQL String Functions Trimming and Pattern Matching**

Lesson 5 : **Special SQL Joins Tutorial Natural Cross and Self SQL for Beginners**
