About the course HTML introduction

Course Presenter : URDUIT Academy

HTML Introduction Course: In this course, you will receive an introduction to HTML (HyperText Markup Language), the fundamental language for creating web pages. Learn about HTML tags, elements, and attributes that structure and present content. Understand how to create headings, paragraphs, lists, links, images, forms, and tables. With hands-on exercises and examples, this course provides a solid foundation in HTML for beginners. Suitable for aspiring web developers, designers, and anyone interested in creating web pages, this course equips you with the knowledge to build the structure and content of websites using HTML.
