Mindluster Platform

About the course Setting Up git and gitHub for beginners

Setting Up git and gitHub course, in this course we'll walk you through the essential steps to get started with Git and GitHub. You'll learn how to install Git on your local machine, configure it with your user information, and initialize your first Git repository. We'll also cover key concepts such as version control, branching, and merging, empowering you to manage your project's code effectively. Additionally, we'll delve into GitHub, where you'll learn how to create a GitHub account, set up SSH keys, and interact with remote repositories. By the end of this course, you'll have the foundational knowledge and practical skills needed to confidently use Git and GitHub for your projects. Join us as we embark on this journey to streamline your development workflow and collaborate more efficiently with others using Git and GitHub.
