

About the course Photoshop AI for creative design

Photoshop AI course, in this course you will explore the transformative capabilities of artificial intelligence integrated within Adobe Photoshop, designed to elevate your creative projects and streamline your workflow. Starting with an introduction to Photoshop's AI tools, this course will guide you through the latest AI-powered features, such as Adobe Sensei, which enhances photo editing, retouching, and design processes with remarkable precision and efficiency. You will learn how to use AI tools for automatic image enhancements, such as the Neural Filters for applying sophisticated adjustments, skin smoothing, and style transfers with just a few clicks. The course will cover advanced selection techniques, including the AI-driven Select Subject and Select and Mask features, which make complex selections effortless and accurate. Additionally, you will discover how AI can aid in content creation, from generating realistic textures and patterns to enhancing composite images seamlessly. Practical exercises will provide hands-on experience with AI-enhanced tools like Content-Aware Fill, which intelligently fills in gaps and removes unwanted objects from your photos, and Sky Replacement, which allows you to swap out skies with a single click.
