About the course Tableau basics for beginners

Tableau basics course, in this course we will learn about the Tableau basics, a fundamental introduction to using Tableau, a powerful tool for data visualization and analysis. The course starts with installing and setting up Tableau, getting you familiar with its interface and key features. You will learn how to connect Tableau to various data sources, such as Excel files, databases, and cloud services, and understand the process of preparing and cleaning data within Tableau. We will explore creating basic charts and graphs, including line charts, bar charts, and pie charts, and customizing these visualizations to meet specific analytical needs. The course also covers how to build interactive dashboards by combining multiple visualizations into a single, cohesive view, allowing for dynamic data exploration. You will learn to use filters to sort data dynamically, create groups for data classification, and apply calculated fields to perform deeper analysis. Additionally, the course will introduce you to advanced features like creating hierarchies, using sets, and understanding Tableauâ€™s data blending capabilities. By the end of this course, you will have the essential skills to use Tableau effectively for data analysis and visualization, turning raw data into actionable insights. This course is perfect for beginners looking to start a career in data analysis or for professionals aiming to enhance their data visualization skills using Tableau.
