About the course Corporation accounting fundamentals

Corporation accounting course, in this course we will explore the fundamentals of Corporation Accounting, focusing on the essential principles and practices used in managing and reporting financial information for corporations. Starting with an introduction to corporate financial statements, we will cover key topics such as accounting for stock transactions, dividends, and earnings per share. We will also examine the preparation and analysis of consolidated financial statements, corporate mergers and acquisitions, and accounting for corporate taxes and debt. By the end of the course, you will gain a comprehensive understanding of how to apply accounting principles to corporate financial activities, ensuring accurate and compliant reporting.
