About the course Combining multiple files in PowerQuery

Combining multiple files in PowerQuery course, in this course we will learn about combining multiple files in PowerQuery. This course will guide you through the process of using PowerQuery in Excel to automate the consolidation of data from multiple files located in the same folder. You will learn how to import data from a folder, combine the contents of these files into a single table, and perform data transformations to prepare your data for analysis. We will cover the steps to configure PowerQuery to automatically update as new files are added to the folder, ensuring your data remains current. Additionally, you will discover advanced techniques for handling different file formats and structures, customizing the import process, and optimizing the performance of your queries. Practical examples and hands-on exercises will help you master these skills and apply them to real-world scenarios. By the end of the course, you will be proficient in using PowerQuery to efficiently combine and manage data from multiple files, enhancing your data analysis capabilities and improving productivity. This course is ideal for data analysts, Excel enthusiasts, and anyone looking to streamline their data consolidation processes. Join us to unlock the full potential of PowerQuery for combining multiple files.
