Mindluster Platform

About the course Cloud data fusion for beginners

Cloud data fusion course, in this course we will start by exploring the fundamental concepts and tools that make Google Cloud Data Fusion a powerful platform for data integration and transformation. Youâ€™ll learn how to create, manage, and optimize data pipelines using a visual, drag-and-drop interface, allowing you to connect various data sources, perform complex transformations, and move data seamlessly across environments. We will guide you through setting up your Cloud Data Fusion environment, configuring connections to diverse data sources, and designing ETL (Extract, Transform, Load) processes that meet your business needs. The course will also cover advanced topics such as real-time data processing, automating workflows, and integrating with other Google Cloud services. Additionally, you'll gain hands-on experience through practical exercises that demonstrate how to handle large-scale data integration challenges efficiently. By the end of this course, you'll be equipped with the skills and knowledge to leverage Cloud Data Fusion for building robust, scalable data pipelines that support your organization's data-driven initiatives. Join us to master Cloud Data Fusion and take your data integration capabilities to the next level.

Computer Science Category's Courses

Course Lesson(6)

Lesson 1 : **Exploring the Lineage of Data with Cloud Data Fusion GSP812**

Lesson 2 : **Building Realtime Pipelines in Cloud Data Fusion GSP808**

Lesson 3 : **Redacting Confidential Data within your Pipelines in Cloud Data Fusion GSP811**

Lesson 4 : **Building Transformations and Preparing Data with Wrangler in Cloud Data Fusion**

Lesson 5 : **Building Batch Pipelines in Cloud Data Fusion GSP807**

Lesson 6 : **Getting Started with Cloud Data Fusion**
