About the course Installing wordPress on windows 10

Installing wordPress on windows 10 course, in this course you will learn how to install WordPress on Windows 10, setting up a local development environment to create and manage websites offline. We will guide you step-by-step through the process, starting with the installation of essential software like XAMPP or WAMP, which are required to create a local server environment. You'll then download and configure WordPress, ensuring it runs smoothly on your Windows 10 machine. The course covers key steps such as creating a database, configuring wp-config files, and testing your WordPress site locally. This setup is ideal for experimenting with themes, plugins, and customizations without needing an active internet connection or a web hosting service. Additionally, we'll explore best practices for managing your local WordPress site, including how to migrate it to a live server when ready. By the end of the course, you'll have the skills to install and manage WordPress locally on Windows 10, perfect for beginners or developers looking to build and test websites efficiently.
