About the course PC performance optimization techniques

PC performance optimization course, in this course you will learn how to significantly enhance your computerâ€™s speed, efficiency, and overall performance. We will begin with an overview of common factors that slow down PCs, including cluttered files, outdated software, and unnecessary startup programs. You'll discover how to clean up your system by removing temporary files, uninstalling unused applications, and managing disk space more effectively. The course will also cover essential techniques like optimizing startup processes, adjusting system settings for better performance, and utilizing built-in tools like Task Manager and Disk Cleanup. Youâ€™ll learn how to update drivers and software, which can enhance both speed and security. Weâ€™ll dive into hardware considerations such as RAM upgrades and SSD installation for improving performance. Additionally, weâ€™ll explore advanced tips like managing virtual memory, reducing background processes, and maintaining system health with regular updates and scans.
