About the course Audio meter and tympanometry techniques

Audio meter and tympanometry course, in this course we will learn about the principles and applications of audiometry and tympanometry in assessing hearing and middle ear function. Participants will explore the operation and calibration of audiometers, how to perform hearing tests, and interpret audiograms to identify different types and degrees of hearing loss. Additionally, the course covers the basics of tympanometry, including measuring eardrum movement, detecting fluid buildup, and diagnosing middle ear disorders. Emphasis will be placed on best practices for pediatric and adult testing, equipment maintenance, and troubleshooting common issues. By the end of the course, learners will be equipped with the skills needed to perform accurate hearing assessments and middle ear evaluations confidently.
