About the course ECG machines techniques

ECG machines course, in this course we will learn about the operation, principles, and applications of ECG (Electrocardiogram) machines, which are used to measure the heart's electrical activity. The course covers how to correctly place electrodes to obtain accurate readings, interpret ECG waveforms, and identify common cardiac abnormalities such as arrhythmias, ischemia, and myocardial infarction. Participants will explore different types of ECGs, including 12-lead and Holter monitors, and learn proper maintenance and troubleshooting of the machines. Emphasis will be placed on ensuring patient safety, minimizing artifacts, and understanding ECG's role in clinical decision-making. By the end of the course, learners will have the skills to effectively use ECG machines in various healthcare settings.

Medical Category's Courses

Course Lesson(3)

Lesson 1 : **ECG Machines Trailer Biomedical Engineers TV**

Lesson 2 : **ECG Machines Electrocardiograph Biomedical Engineers TV**

Lesson 3 : **ECG Machine Electrocardiogram Part 2 Biomedical Engineers TV**
