About the course Lithotripsy machine techniques

Lithotripsy machine course, in this course we will learn about the operation, principles, and applications of lithotripsy machines used to treat kidney stones and other calculi non-invasively. The course covers different lithotripsy techniques, including Extracorporeal Shock Wave Lithotripsy (ESWL) and laser lithotripsy, focusing on how these methods fragment stones for easier elimination. Participants will explore patient preparation, safety protocols, and real-time imaging techniques to ensure accurate targeting. Additionally, the course will cover equipment setup, calibration, and troubleshooting common issues, along with maintenance procedures to ensure optimal machine performance. By the end of the course, learners will be equipped with the skills to operate lithotripsy machines effectively in clinical settings, ensuring safe and successful patient outcomes.
