About the course Bronchoscopy procedure techniques

Bronchoscopy procedure course, in this course we will learn about the Bronchoscopy procedure, its types, and applications in diagnosing and treating respiratory conditions. Students will explore the use of flexible and rigid bronchoscopes, patient preparation, and sedation protocols. The course covers essential skills like biopsy techniques, managing complications, and therapeutic interventions such as removing obstructions and delivering medication. Practical sessions will guide participants through endobronchial ultrasound (EBUS) and advanced interventional procedures. This course is ideal for healthcare professionals aiming to enhance their expertise in pulmonary care, critical care management, and lung cancer diagnostics.
