About the course Slit Lamp techniques

Slit Lamp course, in this course we will learn about the Slit Lamp, focusing on its use in detailed eye examinations. Participants will explore the setup, calibration, and operation of the slit lamp for diagnosing various ocular conditions. The course covers key techniques, such as adjusting light intensity and slit width, and using fluorescein staining for corneal assessment. We will also examine how to evaluate the anterior chamber, detect cataracts, and monitor glaucoma. Troubleshooting common equipment issues will be addressed, alongside pediatric applications. This course provides essential skills for healthcare professionals to conduct accurate eye examinations and enhance their diagnostic capabilities in ophthalmology.

Medical Category's Courses

Course Lesson(4)

Lesson 1 :
Mastering the Working Principle and Procedure of Slit Lamps Everything You Need to Know

Lesson 2 : **What is Tonometry and what is the Working Principle of slit lamp Purpose Procedure**

Lesson 3 :
Ophthalmoscope Fundoscopy How to use Fundoscopy Direct Ophthalmoscope indirect Ophthalmoscope

Lesson 4 : **Slit Lamp slit lamp examination slit lamp techniques slit lamp biomicroscopy**
