About the course Eye disorders medical surgical nursing

Eye disorders medical surgical course, in this course we will explore the fundamentals of medical and surgical management of common eye disorders. It covers the anatomy and physiology of the eye, diagnostic techniques, treatment protocols, and post-surgical care. Students will gain insights into conditions like cataracts, glaucoma, retinal detachment, and macular degeneration, as well as techniques for eye surgeries and laser treatments. We will also focus on patient assessment, care planning, and follow-up strategies. Through case studies and practical sessions, learners will develop critical thinking skills essential for managing ophthalmic conditions effectively in both clinical and surgical settings.
