Mindluster Platform

About the course Website security basics

Website security course, in this course provides a thorough understanding of essential practices to protect your website from cyber threats. Designed for beginners and experienced users alike, this course covers key concepts in website security, including common vulnerabilities like SQL injection, cross-site scripting, and DDoS attacks. Youâ€™ll learn how to secure your websiteâ€™s architecture, implement SSL certificates, set up firewalls, and use secure authentication methods to safeguard user data. The course also explores best practices for managing permissions, performing regular updates, and using security plugins for popular platforms like WordPress. Youâ€™ll gain hands-on experience with tools for monitoring security breaches, managing backups, and responding to threats in real-time. Additionally, the course addresses compliance with data protection regulations, emphasizing safe data storage and handling practices. By the end, youâ€™ll be equipped with the knowledge to create a secure, resilient website environment, protecting your business, users, and valuable data from online risks.
