About the course Networking basics for beginners

Networking basics, in this course offers an essential introduction to networking, perfect for beginners seeking to understand the fundamentals of computer networks. Learn key concepts such as IP addressing, subnets, and network protocols like TCP/IP and HTTP. Explore the role of routers, switches, and other network devices in creating and maintaining communication between systems. Understand the difference between LANs, WANs, and the internet, as well as the basics of wireless networking. The course also covers topics like network security, firewalls, and troubleshooting common networking issues. Through practical examples and hands-on exercises, you'll gain the skills to set up and manage simple networks. By the end of the course, youâ€™ll have a solid foundation in networking, preparing you for further studies or careers in IT and network administration.
