Mindluster Platform

About the course SelectorsHub for beginners

SelectorsHub, in this course provides a comprehensive introduction to SelectorsHub, a powerful browser extension that simplifies the creation and validation of XPath and CSS selectors for web automation and testing. Learn how to efficiently generate precise selectors, debug dynamic elements, and handle complex scenarios like Shadow DOM, iframes, and nested elements. The course covers key features of SelectorsHub, such as auto-suggestion for selectors, error detection, and seamless integration with tools like Selenium. Through hands-on exercises, youâ€™ll explore advanced functionalities, including customizing locators and improving automation scripts. Whether youâ€™re a beginner or an experienced tester, this course equips you with the knowledge to optimize your web testing workflows, save time, and enhance accuracy in creating locators. By the end, youâ€™ll be confident in using SelectorsHub to streamline your automation projects and overcome common challenges in web element identification.
