About the course Cybersecurity red team fundamentals

Course Presenter : Cyberwings Security

Cybersecurity red team, in this course we will learn about red team concepts, tools, and techniques used to simulate real-world cyberattacks. You'll understand how to think like an attacker, perform reconnaissance, gain initial access, escalate privileges, and move laterally within networks. Weâ€™ll also cover popular red team tools such as Metasploit, Nmap, and Cobalt Strike. Through hands-on labs and real-world scenarios, you will develop the skills to identify vulnerabilities, exploit systems, and report your findings effectively. This course is ideal for ethical hackers, penetration testers, and anyone looking to master red team operations. Join us and start your journey into offensive cybersecurity today.
