About the course Growing peppers at home

Course Presenter : DIY Garden Ideas

Growing peppers, in this course we will learn how to grow a variety of peppers, including sweet bell peppers and hot chili types, from seed to harvest. The course begins with selecting the right pepper varieties for your climate and intended use. Youâ€™ll learn how to start seeds indoors, transplant seedlings, and prepare well-drained, nutrient-rich soil. Weâ€™ll explore sunlight requirements, ideal temperatures, and proper spacing to ensure healthy growth. The course also covers watering schedules, organic fertilization, and how to support pepper plants as they grow. You'll learn to identify common pests and diseases, with natural ways to manage them. Pruning and pinching techniques for boosting yield are also included. Finally, youâ€™ll discover the best harvesting times and post-harvest care to preserve flavor and freshness. Whether you're growing in garden beds, pots, or greenhouses, this course provides everything you need to cultivate vibrant, productive pepper plants successfully. DIY Garden Ideas

Science Category's Courses
