Mindluster Platform

About the course Git setup for beginners

Course Presenter : Telusko

Git setup, in this course we will learn about Git setup from scratch, including installing Git on Windows, macOS, and Linux. You'll configure your global username and email, set up SSH keys for secure authentication with platforms like GitHub and GitLab, and understand the difference between global and local Git settings. The course will also guide you through initializing repositories, cloning projects, setting up .gitignore files, and integrating Git with code editors like VS Code. Youâ€™ll explore Git credential storage options and how to troubleshoot common setup issues. Whether you're a beginner or transitioning to a new development environment, this course provides everything you need to get Git up and running effectively. Start the Git Setup Course today and build a strong foundation for managing your code with confidence. Telusko

Programming Category's Courses

Course Lesson(17)

Lesson 1 : **Git Version Control**

Lesson 2 : **Git Setup**
