About the course Java programming for beginners

Course Presenter : Telusko

Java programming, in this course we will learn about Java programming from the ground up, covering core concepts such as variables, data types, operators, control structures, loops, and arrays. Weâ€™ll explore object-oriented programming principles including classes, objects, inheritance, polymorphism, abstraction, and encapsulation. The course also introduces exception handling, file I/O, collections framework, and multithreading. You will gain hands-on experience by building real-world projects and understanding how Java is used in desktop, web, and mobile application development. By the end of this course, youâ€™ll be equipped with the skills to build robust, scalable, and secure Java applications. Whether you're a beginner or looking to refresh your skills, this course offers a practical, project-based path to becoming a confident Java developer ready for real-world challenges. Telusko

Programming Category's Courses

Course Lesson(7)
