About the course Figma MCP

Course Presenter : AI LABS

Figma MCP , in this course we will learn about the MCP methodology in Figma, which stands for Modules, Components, and Patterns. This approach helps designers build scalable, organized, and reusable design systems. Weâ€™ll begin by understanding how to create and manage small UI modules like buttons and inputs, then combine them into components such as cards, forms, and headers. From there, weâ€™ll explore how to construct complex UI patterns using these components to design full interfaces and workflows. Youâ€™ll also learn best practices for naming, organizing layers, and using Figma's powerful tools like variants, auto layout, and design tokens. Whether you're a solo designer or part of a large product team, this course will guide you in building efficient, professional design systems that support collaboration, consistency, and rapid iteration. By the end, youâ€™ll be equipped to apply MCP in real-world projects and elevate your design process. AI LABS
