About the course Laravel vue CRUD with file upload

Course Presenter : Tony Xhepa

Laravel vue CRUD with file upload, in this course we will learn about Laravel Vue CRUD with File Upload course, starting from setting up the development environment to building a complete full-stack CRUD application with file upload functionality. You will begin by mastering Laravel as the backend framework, creating a RESTful API with routing, controllers, models, migrations, and validations for both data and files. Then, we will move to Vue.js for the frontend, setting up components, managing state, integrating Axios for API requests, and building forms that handle file uploads alongside text data. You will learn how to validate and store files securely, display uploaded files, and manage Create, Read, Update, and Delete operations efficiently. We will also cover multiple file uploads, image previews, and progress bars. By the end of this Laravel Vue CRUD with File Upload course, you will have the skills to develop professional, scalable, and interactive web applications with file management features. Tony Xhepa
