About the course Deploy Laravel on VPS

Course Presenter : Tony Xhepa

Deploy Laravel on VPS, in this course Deploy Laravel on VPS course is designed to guide you step-by-step through the process of hosting and running your Laravel applications on a Virtual Private Server for optimal performance and control. In this course, we will learn about preparing a VPS environment, installing PHP, MySQL, and necessary extensions, and configuring Nginx or Apache for Laravel. You will discover how to upload your Laravel project, set correct file permissions, and configure environment variables for production. We will cover running database migrations, setting up Laravel queues, enabling SSL with Letâ€™s Encrypt, and optimizing your application for speed and security. Additionally, you will learn how to automate deployments using Git or CI/CD tools and monitor your application to ensure it runs smoothly. By the end, you will have the skills to confidently deploy and maintain Laravel projects on any VPS hosting provider. Tony Xhepa

Programming Category's Courses

Course Lesson(13)
