About the course Laravel event Project

Course Presenter : Tony Xhepa

Laravel event Project, in this course Laravel Event Project course is designed to teach you how to build applications using Laravelâ€™s powerful event and listener system, enabling clean, scalable, and maintainable code. In this course, we will learn about creating events to represent specific actions within your application, such as user registration or order creation, and attaching listeners to handle the logic triggered by those events. You will explore how to register events in the Event Service Provider, pass data through events, and use queued listeners for background processing. We will cover broadcasting events for real-time features using Laravel Echo and Pusher, as well as testing and debugging your event-driven architecture. By the end of the course, you will have hands-on experience creating a fully functional Laravel Event Project, mastering how to implement event-driven design patterns to improve code organization, flexibility, and reusability in Laravel applications.
